

Specifically designed to  
provide nitrogen and sulphur  
to broadacre and pasture crops

# UAS / High NS™

A simple one pass application of either UAS or High NS will provide your crop with the nutrients required for increased crop health, encouraged crop growth and increased yield potential.

## Benefits

- Both have similar cost per unit of nitrogen compared to UAN, however also contain sulphur.
- UAS is produced in a nitrogen to sulphur ratio of 4:1, a similar ratio to the nutrient removal of canola
- High NS™ is produced in a nitrogen to sulphur ratio of 12:1, a similar ratio to the nutrient removal of wheat
- Sulphur is a building block of protein and a key ingredient in the formation of chlorophyll. Without adequate sulphur, crops can not reach their full potential in terms of yield or protein content.
- Both products are compatible with a range of SLTEC's trace elements and many agricultural chemicals. Contact SLTEC® for specific compatibility data.

## UAS Analysis

Nitrogen	26.7%
Sulphur	6.7%

## High NS Analysis

Nitrogen	36.0%
Sulphur	2.9%

## Application Rates

### Foliar

30 - 60 L/ha with at least 100 L/ha water

### Streaming nozzle

60 - 200L/ha with water as needed

### Fertigation

40 - 200 L/ha
